Analysis and assessment of proposal AFPUB-2012-V4-001-DRAFT-01 (Anycast Assignments in the AFRINIC region) || Date of Assessment: 10-02-2013

## **How the staff understands the proposal**

The proposal allows the issuance of IPv4 space (/24 minimum) explicitly for anycast services.

## **Staff Comments**

- Previous requests for anycast services have been denied, since the requested /24 (or other size) must meet the immediate 50% utilization requirement in the End User policy. Most anycast services need a few IP addresses immediately, not the entire /24, hence would be denied under current policy. This proposal guides AFRINIC appropriately when handling and evaluating these types of requests.
- The proposal would be implemented with minimal impact on internal AFRINIC resources.

## **Legal Aspects**

At the moment we do not foresee any legal aspects and if they are envisaged in due course, our legal counsel will advise.
