In-line with the
Global Policy for the
Allocation of the
Remaining IPv4 Address
Space (<http://www.icann.org/en/general/allocation-remaining-ipv4-space.htm>)

We shall be conducting reach-ability and debogonising tests on 102/8, as usual, before starting to allocate from this space to the community.

However, we also do urge all operators to appropriately update any filters that may be in place so as to allow space from 102/8 to be used without any issues.

A list of all resources in the AfriNIC pool is available [here](#)
